

## Field History Sheet

Complete this form for all fields, greenhouses, high tunnels/hoophouses and growing areas you are farming, including all organic and transitional land. You can use your own form as long as it contains the same information. The only greenhouse, high tunnel or hoophouse production that need to be listed are in-ground production. Greenhouses used for seedling production or container growing do not have to be listed on this form. You do not need to list specific crops and may use crop categories like mixed vegetables, herbs, salad mix, greens, etc or list them by their crop families. Do not list materials used on this form. Materials need to be listed within your Organic Farm Plan.

The primary purpose of this form is to track crop rotations, so list as much information about your rotations as you can including cover crops used. If you are doing succession plantings, note the number of times a crop will be grown in the calendar year. If you are rotating crops in beds within a field, note that.
